

Managing soil carbon

What have we learnt from the MGB project?

Small groups – great benefits in getting together to share ideas and information

Less cultivation more direct drilling

Fallowed then deep
ripped then sown to
clover

Beans then deep
ripped then sown to
clover

Beans then direct
drilled to clover

Correct soil moisture when cultivating

**More long term pastures in the rotation –
grass is good!**

**More winter cover crops in the rotation –
keep feeding the soil (as well as the lambs)**
